Subject Index of Volumes 59 and 60

Adhesion
adhesion of metal coatings on ceramics deposited by different techniques, 325
an interface study of various PVD TiN coatings on plasma-nitrided austenitic stainless steel AISI 304, 468
fracture mechanics tests for measuring adhesion of magnetron-sputtered TiN coatings, 401
influence of plasma surface treatment on adhesion of thin films on metal, 301
surface modification of polypropylene in oxygen and nitrogen plasmas, 350
Adhesivity
improvement in polymer adhesivity by low and normal pressure plasma surface modification, 371
Aerospace applications
an improved method for the deposition of corrosion-resistant Al coatings for aerospace applications, 592
solid lubrication by low friction surfaces, 511
Al_2O_3 coatings
synthesis of Al_2O_3 condensates from impulse plasma, 281
Al_2O_3 layers
aspects and results of long-term stable deposition of Al_2O_3 with high rate pulsed reactive magnetron sputtering, 177
AlN
deposition and characterization of non-conducting SiN, AlN and (Ti–Al)N thin films, 187
plasma and ion-beam-assisted deposition of multilayers for tribological and corrosion protection, 561
Alumina films
high rate deposition of alumina films by reactive gas flow sputtering, 171
Aluminium
corrosion and wear properties of multipurpose coatings deposited by ion-beam-assisted deposition, 556
structure and properties of multicomponent and multilayer hard coatings obtained by the bias activated reactive evaporation method, 450
Al alloys
deposition of PYSZ onto Al alloy substrates using PVD, 536
Al coatings
an improved method for the deposition of corrosion-resistant Al coatings for aerospace applications, 592
Analysis
r.f. magnetron sputter deposition of Cr_2O_3 layers on ceramic Al_2O_3 substrates, 183
Antireflective coatings
large scale antireflective coatings on glass produced by reactive magnetron sputtering, 624
Audio-frequency reactor
dielectric and semiconducting Ge–C and Si–C thin films prepared by plasma deposition from organic compounds, 609
Auger electron spectroscopy
RFe_2 thin film formation by ion beam sputtering with plasma filament type ion source, 156
Automotive applications
metal–carbon layers for industrial application in the automotive industry, 531
a-SiC:H alloys
on the stress in plasma-deposited a-SiC:H films, 424
a-SiC:H coatings
corrosion resistance of amorphous hydrogenated SiC and diamond-like coatings deposited by r.f. PECVD, 577
Boron nitride
characterization of mixed-phase BN thin films deposited by plasma CVD, 502
electron-assisted hot-filament CVD of E-BN layers, 498
Carbon
ion-assisted modification of the condensation of thermal carbon atoms, 255
Cathodic arc technique
preparation and performance of (Cr,Ti)N coatings deposited by a combined hollow cathode and cathodic arc technique, 160
Ceramics
adhesion of metal coatings on ceramics deposited by different techniques, 325
application of microwave plasma to the oxidation of ceramic material under conditions of atmospheric re-entry, 587
modification of the mechanical surface properties and tribochemistry of structural ceramics by ion beam techniques, 249
Charged particle transport
modelling of discharges and non-thermal plasmas—applications to plasma processing, 32
Chemical vapour deposition (CVD)
deposition of Me–C:H coatings from metal organic precursors using a plasma–activated r.f. process, 345
in-situ monitoring of electron cyclotron resonance plasma CVD of hydrogenated SiN films, 77
microstructural and morphological study of diamond crystals and films elaborated by microwave PACVD, 330
Chemiluminescent reactions
spectroscopy of flowing discharges and post-discharges in reactive gases, 67
Chromium based coatings
corrosion properties of selected Cr-based hard and protective coatings, 545
oxidation resistance of PVD Cr, Cr–N and Cr–N–O hard coatings, 244
TiN and CrN PVD coatings on electroless nickel-coated steel substrates, 474
Chromium nitride
influence of substrate material and deposition parameters on the structure, residual stresses, hardness and adhesion of sputtered Cr_xN_y hard coatings, 428
Chromium oxides
r.f. magnetron sputter deposition of Cr_2O_3 layers on ceramic Al_2O_3 substrates, 183
Colour
decorative hard coatings: interdependence of optical, stoichiometric and structural properties, 389
Combustion engines
cylindrical magnetron sputtering for the production of wear-resistant and durable overlays of uniform thickness for journal bearings for application in high performance combustion engines, 541

Computer simulation
process control of plasma nitriding and plasma nitrocarburizing in industry, 129
Copper
control of mechanical and structural properties of coatings deposited using unbalanced magnetrons, 105
thin copper films deposited by low temperature plasma-enhanced MOCVD using copper-acetylacetonate, 212
Corrosion
corrosion and wear properties of multipurpose coatings deposited by ion-beam-assisted deposition, 556
corrosion properties of selected Cr-based hard and protective coatings, 545
CrN sputtering
influence of reactive gas flow on CrN sputtering, 135
$CrSi/MoS_2$ coating
low friction composite coating of Cr_xSi_y/MoS_2 on steel, 515
(Cr,Ti)N coatings
preparation and performance of (Cr,Ti)N coatings deposited by combined hollow cathode and cathodic arc technique, 160
Cutting tools
soft PVD coatings—a new coating family for high performance cutting tools, 584
c-BN
ECR plasma deposition of c-BN using *N*-trimethylborazine, 493

Decorative coatings
decorative hard coatings: interdependence of optical, stoichiometric and structural properties, 389
Deep-level transient spectroscopy
modification of near-surface regions in Si by low energy particles, 221
Deposition
aspects and results of long-term stable deposition of Al_2O_3 with high rate pulsed reactive magnetron sputtering, 177
comparison of microwave and r.f. plasmas: fundamentals and applications, 1
deposition of graded alloy nitride films by closed field unbalanced magnetron sputtering, 21
preparation and performance of (Cr,Ti)N coatings deposited by a combined hollow cathode and cathodic arc technique, 160
Deposition parameters
control of mechanical and structural properties of coatings deposited using unbalanced magnetrons, 105
high rate deposition of alumina films by reactive gas flow sputtering, 171
Deposition processes
modification of near-surface regions in Si by low energy particles, 221
Diamond
microstructural and morphological study of diamond crystals and films elaborated by microwave PACVD, 330
Diamond CVD
role of hydrogen in deposition of diamond films, 310
Diamond films
gas phase mechanisms during deposition of diamond films, 506
Diamond-like carbon
deposition of wear resistant coatings based on diamond like carbon by unbalanced magnetron sputtering, 525
Diamond-like coatings
corrosion resistance of amorphous hydrogenated SiC and diamond-like coatings deposited by r.f. PECVD, 577
Dielectric surfaces
plasma-based technique for controlled low energy ion bombardment of dielectric surfaces, 239
Discharge models
modelling of discharges and non-thermal plasmas—applications to plasma processing, 32
Dust emissions
environmental aspects of PVD processes, 619
d.c. discharges
calculation of ion energy distributions in low frequency r.f. glow discharges, 86
d.c. excitation
determination of mass and energy distribution of ions in glow discharges, 97

Economic and ecological aspects
economic and ecological aspects of plasma surface engineering, 613
Electrical conductivity
thin conductive coatings by plasma polymerization of 2-iodothiophene, 359
Electrical properties
experimental and theoretical study of electrical properties of a triode reactor, 54
Electrochemical properties
corrosion properties of selected Cr-based hard and protective coatings, 545
Electromagnetic techniques
behaviour of a steered cathodic arc as a function of steering magnetic field, 126
Electron cyclotron resonance
ECR plasma deposition of c-BN using *N*-trimethylborazine, 493
in-situ monitoring of ECR plasma CVD of hydrogenated SiN films, 77
Electron probe microanalysis
characterization of a TiN deposition process based on structural studies, plasma diagnostic and mathematical modelling, 91
Electron spectroscopy
influence of plasma treatment conditions on growth and electrical properties of oxides on INP, 121
Ellipsometry
optical properties of plasma polymer films, 365
Emission spectroscopy
laser induced plasma for controlling properties of thin films, 26
spectroscopy of flowing discharges and post-discharges in reactive gases, 67
Environmental effects
economic and ecological aspects of plasma surface engineering, 613
environmental aspects of PVD processes, 619
Equivalent circuit
experimental and theoretical study of electrical properties of a triode reactor, 54
Etching
comparison of microwave and r.f. plasmas: fundamentals and applications, 1
PECVD of thin insulator films and reactor cleaning, 306
plasma treatment for cleaning of metal parts, 290
surface etching of three-dimensional carbon-fibre-reinforced plastics in a dual-frequency mode plasma (40 kHz and 2.45 GHz), 297
Evaporation
a practical model to enable the prediction of coating thickness variations across a flat surface, 48
coating thickness fall-off with source to substrate distance in PVD processes, 113

Film porosity
dependence of hardness and corrosion protection power of ion beam assisted deposition TiN coatings on the ion beam impact angle, 549

Film properties
pulsed barrier discharges for thin film production at atmospheric pressure, 144
Fourier transform IR
PECVD of thin insulator films and reactor cleaning, 306
Fracture mechanics
fracture mechanics tests for measuring adhesion of magnetron-sputtered TiN coatings, 401

Gas phase composition
role of hydrogen in deposition of diamond films, 310
Gas phase mechanisms
gas phase mechanisms during deposition of diamond films, 506
GeC films
dielectric and semiconducting Ge–C and Si–C thin films prepared by plasma deposition from organic compounds, 609
Glow discharge
arc-enhanced glow discharge in vacuum arc machines, 152
determination of mass and energy distribution of ions in glow discharges, 97
ion nitriding of Armco iron in various glow discharge regions, 321
Growth species
role of hydrogen in deposition of diamond films, 310

Hard coatings
influence of substrate material and deposition parameters on the structure, residual stresses, hardness and adhesion of sputtered Cr_xN_y hard coatings, 428
High and low frequency
experimental and theoretical study of electrical properties of a triode reactor, 54
High refractive materials
large scale antireflective coatings on glass produced by reactive magnetron sputtering, 624
Hot-filament CVD
electron-assisted hot-filament CVD of E-BN layers, 498
Hydrophobation
factors influencing the hydrophobic recovery of oxygen-plasma-treated polyethylene, 356

IBAD
corrosion and wear properties of multipurpose coatings deposited by ion-beam-assisted deposition, 556
dependence of hardness and corrosion protection power of ion beam assisted deposition TiN coatings on the ion beam impact angle, 549
plasma and ion-beam-assisted deposition of multilayers for tribological and corrosion protection, 561
Impulse plasma deposition
synthesis of Al_2O_3 condensates from impulse plasma, 281
Insulatory films
PECVD of thin insulator films and reactor cleaning, 306
Interfaces in multilayer films
microstructural and magnetic studies of interfaces in sputtered metal/carbon and metallic multilayer films, 379
Ion beam sputtering
RFe_2 thin film formation by an ion beam sputtering with plasma filament type ion source, 156
Ion beam techniques
modification of the mechanical surface properties and tribochemistry of structural ceramics by ion beam techniques, 249
Ion bombardment
ion-assisted modification of the condensation of thermal carbon atoms, 255
plasma polymerization of silicon organic membranes for gas separation, 342
Ion carburization
influence of additive rare earths on ion carburization, 117
Ion energy distribution
ion energy distributions in low frequency r.f. glow discharges, 86
Ion implantation
improved tribological properties by ion implantation, 521
microstructure, corrosion and tribological behaviour of plasma immersion ion-implanted austenitic stainless steel, 261
plasma immersion ion implantation—the role of diffusion, 267
some technical aspects of ion implantation as an industrial process for surface modification of metal, 226
Ion plating
coating thickness fall-off with source to substrate distance in PVD, 113
IR spectroscopy
optical properties of plasma polymer films, 365
pulsed barrier discharges for thin film production at atmospheric pressure, 144
thin conductive coatings by plasma polymerization of 2-iodothiophene, 359
IVD aluminium
an improved method for the deposition of corrosion-resistant Al coatings for aerospace applications, 592

Journal bearings
cylindrical magnetron sputtering for the production of wear-resistant and durable overlays of uniform thickness for journal bearings for application in high performance combustion engines, 541

Laser induced plasma
laser induced plasma for controlling properties of thin films, 26
Low alloy steels
PVD hard coatings on prenitrided low alloy steel, 441
Low energy ion bombardment
controlled low energy ion bombardment of dielectric surfaces, 239
Low frequency
ion energy distributions in low frequency r.f. glow discharges, 86
Low pressure CVD
topological effects regarding trench structures covered with LPCVD and PECVD thin films, 316
Low pressure plasma
surface modification of polypropylene in oxygen and nitrogen plasmas, 350
Low-temperature C diffusion
metallurgical study of low-temperature plasma carbon diffusion treatments for stainless steels, 416

Macrostress
relation of deposition conditions of Ti–N films prepared by d.c. magnetron sputtering to their microstructure and macrostress, 484
Magnetic fields
behaviour of a steered cathodic arc as a function of steering magnetic field, 126
Magnetic multilayer films
microstructural and magnetic studies of interfaces in sputtered metal/carbon and metallic multilayer films, 379

Magnetic properties
sputter coating on high speed steel tube using a hybrid plasma produced by coaxial ECR and magnetron discharges, 140
Magnetic storage devices
solid lubrication by low friction surfaces, 511
Magnetron discharges
sputter coating on high speed steel tube using a hybrid plasma produced by coaxial ECR and magnetron discharges, 140
Magnetron sputtering
adhesion of metal coating on ceramics deposited by different techniques, 325
aspects and results of long-term stable deposition of Al_2O_3 with high rate pulsed reactive magnetron sputtering, 177
control of mechanical and structural properties of coatings deposited using unbalanced magnetrons, 105
control of reactive d.c. magnetron sputtering of SnO_2 by means of optical emission, 101
deposition and characterization of non-conducting SiN, AlN and (Ti–Al)N thin films, 187
deposition of graded alloy nitride films by closed field unbalanced magnetron sputtering, 21
r.f. magnetron sputter deposition of Cr_2O_3 layers on ceramic Al_2O_3 substrates, 183
Mechanical properties
mechanical properties of amorphous and polycrystalline multilayer systems, 454
mechanical properties of thin films: a theoretical feasibility study, 396
Mechanical strength
optimization of the surface mechanical strength of AISI 316L physically vapour deposited nitrogen-doped coatings on AISI 316L substrates, 434
Metal
influence of plasma surface treatment and adhesion of thin films on metal, 301
plasma treatment for cleaning of metal parts, 290
some technical aspects of ion implantation as an industrial process for surface modification of metal, 226
surface etching of three-dimensional carbon-fibre-reinforced plastics in a dual-frequency mode plasma (40 kHz and 2.45 GHz), 297
Metal coatings
adhesion of metal coating on ceramics deposited by different techniques, 325
Metal insulator semiconductor
influence of plasma treatment conditions on growth and electrical properties of oxides on INP, 121
remote PECVD with metal organic source gases, 193
Metal organic CVD
new flexible reactor design for R&D PECVD deposition systems, 148
plasma-assisted deposition of hard material layers from organometallic precursors, 207
Metal organic compounds
deposition of Me–C:H coatings from metal organic precursors using a plasma-activated r.f. process, 345
formation of Ti(OCN) layers produced from metal-organic compounds using plasma-assisted CVD, 217
remote PECVD with metal organic source gases, 193
synthesis of thin coatings by plasma assisted CVD using metallo-organic compounds as precursors, 202
Metallic multilayers
microstructural and magnetic studies of interfaces in sputtered metal/carbon and metallic multilayer films, 379
Metallurgical coatings
oxidation resistance of PVD Cr, Cr–N and Cr–N–O hard coatings, 244
Microdischarges
pulsed barrier discharges for thin film production at atmospheric pressure, 144
Microstructure
relation of deposition conditions of Ti–N films prepared by d.c. magnetron sputtering to their microstructure and macrostress, 484
Microstructure zone model
exceptions to the microstructure zone model revealed by reactive d.c. magnetron sputter deposition of δ-TiN_x thin films, 480
Microwave
microwave and r.f. plasmas: fundamentals and applications, 1
Microwave plasma CVD
microstructural and morphological study of diamond crystals and films elaborated by microwave PACVD, 330
Microwave techniques
modelling of a microwave postdischarge nitriding reactor, 59
Modelling
attempted modelling of thickness and chemical heterogeneity in coatings prepared by d.c. reactive magnetron sputtering, 41
experimental and theoretical study of the electrical properties of a triode reactor, 54
Molybdenum
structure and properties of multicomponent and multilayer hard coatings obtained by the bias activated reactive evaporation method, 450
Morphology
microstructural and morphological study of diamond crystals and films elaborated by microwave PACVD, 330
Multilayer coatings
structure and properties of multicomponent and multilayer hard coatings obtained by the bias activated reactive evaporation method, 450
Multilayer systems
mechanical properties of amorphous and polycrystalline multilayer systems, 454
Multilayers
plasma and ion-beam-assisted deposition of multilayers for tribological and corrosion protection, 561
Multipurpose coatings
corrosion and wear properties of multipurpose coatings deposited by ion-beam-assisted deposition, 556

Ni–Cr–Ti coatings
Ni–Cr–Ti protective coating, 603
Nitrides
deposition of graded alloy nitride films by closed field unbalanced magnetron sputtering, 21
PC system for improving the control of reactive gas dosage in sputtering processes for film deposition, 110
Nitriding
diagnostics of a d.c. pulsed-plasma-assisted nitriding process, 82
ion nitriding of Armco iron in various glow discharge regions, 321
plasma immersion ion implantation—the role of diffusion, 267
Nitriding plasmas
spectroscopy of flowing discharges and post-discharges in reactive gases, 67
Nitrogen flow rate
exceptions of the microstructure zone model revealed by the reactive d.c. magnetron sputter deposition of δ-TiN_x thin films, 480

Nitrogen reactivity
reactivity of nitrogen in TiN film formation by reactive ion plating, 489

Optical emission
control of reactive d.c. magnetron sputtering of SnO_2 by means of optical emission, 101
Optical emission spectroscopy
characterization of a TiN deposition process based on structural studies, plasma diagnostic and mathematical modelling, 91
diagnostics of a d.c. pulsed-plasma-assisted nitriding process, 82
PC system for improving the control of reactive gas dosage in sputtering processes for film deposition, 110
thin copper films deposited by low temperature plasma-enhanced MOCVD using copper-acetylacetonate, 212
Organic layers
broad range variation of surface tension by plasma polymerized coatings on polymethyl methacrylate, 338
Oxidation resistance
oxidation resistance of PVD Cr, Cr–N and Cr–N–O hard coatings, 244

PACVD
characterization of mixed-phase BN thin films deposited by plasma CVD, 502
determination of mass and energy distribution of ions in glow discharges, 97
formation of Ti(OCN) layers produced from metal-organic compounds using PACVD, 217
investigation of PA-CVD of TiN: relations of process parameters, spectroscopic measurements and layer properties, 385
on the stress in plasma-deposited a-SiC:H films, 424
plasma-assisted deposition of hard material layers from organometallic precursors, 207
synthesis of thin coatings by PACVD using metallo-organic compounds as precursors, 202
PAPVD
a practical model to enable the prediction of coating thickness variations across a flat surface, 48
TiN and CrN PVD coatings on electroless nickel-coated steel substrates, 474
Parallel plate reactor
new flexible reactor design for R&D PECVD deposition systems, 148
Particle in cell models
modelling of discharges and non-thermal plasmas—applications to plasma processing, 32
PECVD
corrosion resistance of amorphous hydrogenated SiC and diamond-like coatings deposited by r.f. PECVD, 577
new flexible reactor design for R&D PECVD deposition systems, 148
PECVD of thin insulator films and reactor cleaning, 306
$SiC–Si_3N_4$ composite coatings produced by PECVD, 566
topological effects regarding trench structures covered with LPCVD and PECVD thin films, 316
Physical vapour deposition (PVD)
a practical model to enable the prediction of coating thickness variations across a flat surface, 48
arc-enhanced glow discharge in vacuum arc machines, 152
coating thickness fall-off with source to substrate distance in PVD, 113
deposition of PYSZ onto Al alloy substrates using PVD, 536
environmental aspects of PVD processes, 619
metal–carbon layers for industrial application in the automotive industry, 531
optimization of the surface mechanical strength of AISI 316L physically vapour deposited nitrogen-doped coatings on AISI 316L substrates, 434
oxidation resistance of PVD Cr, Cr–N and Cr–N–O hard coatings, 244
process and advantage of multicomponent and multilayer PVD coatings, 14
PVD hard coatings on prenitrided low alloy steel, 441
soft physical vapour deposition coatings—a new coating family for high performance cutting tools, 584
some technical aspects of ion implantation as an industrial process for surface modification of metal, 226
superimposed pulse bias voltage used in arc and sputter technology, 274
surface mechanical strength optimization of ZrO_2 PVD coatings, 458
Plasma actinometry
spectroscopy of flowing discharges and post-discharges in reactive gases, 67
Plasma beam deposition
direct plasma beam deposition of TiN_x layers with an r.f. plasma beam source, 234
Plasma emission monitoring
control of reactive d.c. magnetron sputtering of SnO_2 by means of optical emission, 101
Plasma methods
microwave and r.f. plasmas: fundamentals and applications, 1
deposition of Me–C:H coatings from metal organic precursors using a plasma-activated r.f. process, 345
improvement in polymer adhesivity by low and normal pressure plasma surface modification, 371
influence of plasma surface treatment on adhesion of thin films on metal, 301
plasma immersion ion implantation—the role of diffusion, 267
plasma treatment for cleaning of metal parts, 290
Plasma nitriding
ion nitriding of Armco iron in various glow discharge regions, 321
process control of plasma nitriding and plasma nitrocarburizing processes in industry, 129
Plasma nitrocarburizing
process control of plasma nitriding and plasma nitrocarburizing processes in industry, 129
Plasma polymerization
broad range variation of surface tension by plasma polymerized coatings on polymethyl methacrylate, 338
optical properties of plasma polymer films, 365
plasma polymerization of silicon organic membranes for gas separation, 342
thin conductive coatings formed by plasma polymerization of 2-iodothiophene, 359
Plasma processing
diagnostics of a d.c. pulsed-plasma-assisted nitriding process, 82
modelling of discharges and non-thermal plasmas—applications to plasma processing, 32
Plasma technology
a plasma-based technique for controlled low energy ion bombardment of dielectric surfaces, 239
Plasma treatment
factors influencing the hydrophobic recovery of oxygen-plasma-treated polyethylene, 356
influence of plasma treatment conditions on growth and electrical properties of oxides on INP, 121

Plasma-enhanced MOCVD
thin copper films deposited by low temperature plasma-enhanced MOCVD using copper-acetylacetonate, 212
Plastics
surface etching of three-dimensional carbon-fibre-reinforced plastics in a dual-frequency mode plasma (40 kHz and 2.45 GHz), 297
Polyethylene
factors influencing the hydrophobic recovery of oxygen-plasma-treated polyethylene, 356
Polymer films
optical properties of plasma polymer films, 365
Polypropylene
surface modification of polypropylene in oxygen and nitrogen plasmas, 350
Postdischarge nitriding reactor
modelling of microwave postdischarge nitriding reactor, 59
Powered electrode
ion energy distributions in low frequency r.f. glow discharges, 86
Pulse plasma deposition
high speed steel with microstructures characteristic of heat-treated materials, 287
Pulsed barrier discharges
pulsed barrier discharges for thin film production at atmospheric pressure, 144
Pulsed bias voltage
superimposed pulse bias voltage used in arc and sputter technology, 274
Pulsed laser deposition
laser induced plasma for controlling properties of thin films, 26
PYSZ
deposition of PYSZ onto Al alloy substrates using PVD, 536
Pyrotechnic devices
pyrotechnic devices deposited by magnetron sputtering, 597

Radio frequency
microwave and r.f. plasmas: fundamentals and applications, 1
Radio frequency plasmas
controlled low energy ion bombardment of dielectric surfaces, 239
Raman spectroscopy
role of hydrogen in deposition of diamond films, 310
Rare earths
influence of additive REs on ion carburization, 117
RFe_2 thin film formation by ion beam sputtering with plasma filament type ion source, 156
Reactive magnetron sputtering
reactive magnetron sputtering of ZrC films using $Ar–CH_4$ gas mixtures, 166
Reactive sputter deposition
attempted modelling of thickness and chemical heterogeneity in coatings prepared by d.c. reactive magnetron sputtering, 41
influence of reactive gas flow on CrN sputtering, 135
Remote plasma ECVD
new flexible reactor design for R&D PECVD deposition systems, 148
Remote PECVD
remote PECVD with metal organic source gases, 193
r.f. discharges
ion energy distributions in low frequency r.f. glow discharges, 86

Scanning electron microscopy
laser induced plasma for controlling properties of thin films, 26
reactive magnetron sputtering of ZrC films using $Ar–CH_4$ gas mixtures, 166
synthesis of Al_2O_3 condensates from impulse plasma, 281
Si_3N_4 films
non-conducting SiN, AlN and Ti–AlN thin films, 187
SiC films
dielectric and semiconducting Ge–C and Si–C thin films prepared by plasma deposition from organic compounds, 609
Silicon
modification of near-surface regions in Si by low-energy particles, 221
plasma polymerization of Si organic membranes for gas separation, 342
Silicon carbonitride coatings
$SiC–Si_3N_4$ composite coatings produced by PECVD, 566
SiN films
production and characterization of Si–N films obtained by r.f. magnetron sputtering, 463
SiN : H films
in-situ monitoring of electron cyclotron resonance plasma CVD of SiN films, 77
SiO_2
large scale antireflective coatings on glass produced by reactive magnetron sputtering, 624
Solid lubrication
solid lubrication by low friction surfaces, 511
Space applications
application of microwave plasma to oxidation of ceramic material in atmospheric re-entry, 587
Sputtering
high rate deposition of alumina films by reactive gas flow sputtering, 171
PC system for improving control of reactive gas dosage in sputtering processes for film deposition, 110
sputter coating on high speed steel tube using a hybrid plasma produced by coaxial ECR and magnetron discharges, 140
superimposed pulse bias voltage in arc and sputter technology, 274
Stainless steel
attempted modelling of thickness and chemical heterogeneity in coatings prepared by d.c. reactive magnetron sputtering, 41
metallurgical study of low-temperature plasma carbon diffusion treatments for stainless steels, 416
microstructure, corrosion and tribology of plasma immersion ion-implanted austenitic stainless steel, 261
Steel
high speed steel with microstructures characteristic of heat-treated materials, 287
Stress
stress in plasma-deposited a-SiC : H films, 424
Surface and depth profile
r.f. magnetron sputter deposition of Cr_2O_3 layers on ceramic Al_2O_3 substrates, 183
Surface tension
broad range variation of surface tension by plasma polymerized coatings on polymethyl methacrylate, 338
Synthesis
synthesis of Al_2O_3 condensates from impulse plasma, 281

Tantalum
multicomponent and multilayer hard coatings obtained by BARE, 450

Texture analysis
direct plasma beam deposition of TiN_x layers with r.f. plasma beam source, 234
Thermal conductivity
modelling of microwave postdischarge nitriding reactor, 59
Thermal oxide layers
thermal oxide layers grown on Zircaloy-4 using chemically homogeneous sputter-deposited Zr–O thin films, 405
Thin film analysis
direct plasma beam deposition of TiN_x layers with r.f. plasma beam source, 234
mechanical properties of thin films: a theoretical feasibility study, 396
(Ti,Al)N films
deposition and characterization of non-conducting SiN, AlN and Ti–AlN thin films, 187
Ti–B mixtures
deposition and analysis of pyrotechnic devices deposited by magnetron sputtering, 597
TiN
characterization of TiN deposition process based on structural studies, plasma diagnostic and mathematical modelling, 91
control of mechanical and structural properties of coatings deposited using unbalanced magnetron sputtering, 105
fracture mechanics tests for measuring adhesion of magnetron-sputtered TiN coatings, 401
interface study of PVD TiN coatings on plasma-nitrided austenitic stainless steel AISI 304, 468
PA-CVD of TiN: process parameters, spectroscopic measurements and layer properties, 385
plasma and ion-beam-assisted deposition of multilayers for tribological and corrosion protection, 561
relation of deposition conditions of Ti–N films prepared by d.c. magnetron sputtering to their microstructure and macrostress, 484
structure and properties of multicomponent and multilayer hard coatings obtained by BARE, 450
TiN and CrN PVD coatings on electroless Ni-coated steel substrates, 474
TiN films
dependence of hardness and corrosion protection power of IBAD TiN coatings on ion beam impact angle, 549
direct plasma beam deposition of TiN_x layers with r.f. plasma beam source, 234
exceptions of the microstructure zone model revealed by reactive d.c. magnetron sputter deposition of δ-TiN_x thin films, 480
influence of coating thickness on tool life and wear, 446
reactivity of nitrogen in TiN film formation by reactive ion plating, 489
Titanium
plasma-assisted deposition of hard material layers from organometallic precursors, 207
process and advantage of multicomponent and multilayer PVD coatings, 14
synthesis of thin coatings by PACVD using metallo-organic compounds as precursors, 202
Ti(OCN) layers
Ti(OCN) layers produced from metal-organic compounds using PACVD, 217
Tool wear
influence of coating thickness on tool life and wear, 446
Topology
topological effects regarding trench structures covered with LPCVD and PECVD thin films, 316
Transmission electron microscopy
plasma-assisted deposition of hard material layers from organometallic precursors, 207
Tribology
improved tribological properties by ion implantation, 521
microstructure, corrosion and tribology of plasma immersion ion-implanted austenitic stainless steel, 261
modification of mechanical surface properties and tribochemistry of structural ceramics by ion beam techniques, 249
Trimethylborazine
electron cyclotron resonance plasma deposition of c-BN using *N*-trimethylborazine, 493
Triode reactor
electrical properties of a triode reactor, 54
Tungsten
multicomponent and multilayer hard coatings obtained by BARE, 450
Tungsten–carbon layers
metal–carbon layers for industrial application in automotive industry, 531

Vacuum arc
arc-enhanced glow discharge in vacuum arc machines, 152
behaviour of steered cathodic arc as function of steering magnetic field, 126

WC-based coatings
structural analysis of sputtered $(W\text{-}C)_{1-x}M_x$ films with $0 \leqslant x \leqslant 0.20$, 411
Wear-resistant coatings
deposition of wear resistant coatings based on DLC by unbalanced magnetron sputtering, 525

X-ray diffraction
influence of reactive gas flow on chromium nitride sputtering, 135
layers of high speed steel with microstructures characteristic of heat-treated materials, 287
reactive magnetron sputtering of ZrC films using $Ar–CH_4$ gas mixtures, 166
RFe_2 thin film formation by ion beam sputtering with plasma filament type ion source, 156
X-ray photoelectron spectroscopy
improvement in polymer adhesivity by low and normal pressure plasma surface modification, 371
thin conductive coatings by plasma polymerization of 2-iodothiophene, 359

Zircalloy-4
structural analysis of thermal oxide layers grown on Zircaloy-4 using chemically homogeneous sputter-deposited Zr–O thin films, 405
Zirconium
plasma-assisted deposition of hard material layers from organometallic precursors, 207
synthesis of thin coatings by PACVD using metallo-organic compounds as precursors, 202

ZrB coatings
optical properties and corrosion behaviour of sputtered Zr–B and Zr–B–N coatings, 571
ZrC films
reactive magnetron sputtering of ZrC films using Ar–CH_4 gas mixtures, 166
ZrO films
structural analysis of thermal oxide layers grown on Zircaloy-4 using chemically homogeneous sputter-deposited Zr–O thin films, 405
ZrO_2
surface mechanical strength optimization of ZrO_2 PVD coatings, 458
